# Why CybX?

Solutions use  
proprietary encryption  
strategies

Combined 55 years' experience of  
leadership and innovation in data and  
data center protection

Trusted, reliable solutions.  
Located in a secure facility in  
McKeesport PA.

CybX holds six immune  
architecture patents

# Solutions You Can Trust

*CybX solutions are developed in line with:*

## ISO

- International Organization for Standardization.

## NIST

- National Institute of Standards and Technology.

## ANSI

- American National Standards Institute.

## CIS

- Computer Information Science.

# The Problem

- Regular SMS messages aren't encrypted, meaning every text, voice call, and multimedia sent on your mobile device is made available for mobile carriers, governments, and hackers to view and use as they please. Even if two-factor authentication is used, your data can still be stolen.
- Not only can your data be hacked, but harmful viruses can be sent to your phone through SMS messages.
- When it comes to other messaging apps, either you are being sold or your data is. If you did not pay for your app (i.e. free download) you are the one being sold because they are mining your data.
- Your personal identity should not be publicly available. You should control who you communicate with.

**How can you be sure what you are sending is safe, only seen by the intended audience, and unedited?**

# Our Solution

- **Cloak** is a safe communication app for your phone to keep your messages, voice calls, and multimedia safe. This technology has redefined the security standard for the world by making it virtually impossible for hackers to retrieve your data.

# Why Cloak

- **Cloak Communicator®** ensures the ultimate security of your communication. No one, even with the password to your phone, can gain access to your messages. Everything about your communication is encrypted. This means the method of choice, such as a biometric (fingerprint, eyes, etc...), is required to open the app.

# Cloak Features

- **Anonymous Account Creation:** You can create an account with a fake email or your real email, and do not need to enter any personal details, ever.
- **Secure Account Deletion:** Delete your account safely knowing zero data is kept. Not by us, nor on your device.
- **Secure, Reliable Text Messaging:** Each message you send and receive from a Cloak user has unique cryptographic keys.
- **Secure, Reliable Media Sharing:** Every single picture and video is encrypted using unique cryptographic keys.

# Cloak Features

- **Secure Voice Communication:** Unlike any other app, the audio of your communication is completely encrypted.
- **Choose Your Nickname:** You choose what other people see you as.
- **Message Obfuscation Option:** Cloak will optionally render your text unclear so that people cannot see your messages physically in the app.
- **Chats are Protected:** To view a chat, you must authenticate your account first.

We believe **EVERYONE** should have **ABSOLUTE** privacy & security when communicating

- Law enforcement & legal sector
- Financial services
- Charities
- Security services
- Doctors
- Reporters & journalists
- Victims
- AND MORE!
