Why CybX?

Solutions use
proprietary encryption
strategies

Combined 55 years' experience of
leadership and innovation in data and
data center protection

Trusted, reliable solutions.
Located in a secure facility in
McKeesport PA.

CybX holds six immune
architecture patents

Solutions You Can Trust

CybX solutions are developed in line with:

ISO

- International Organization for Standardization.

NIST

- National Institute of Standards and Technology.

ANSI

- American National Standards Institute.

CIS

- Computer Information Science.

The Problem

- Every **60 seconds** there are **2,600** cyber-attacks in the USA.

Resulting data breaches go unidentified for an average of **206 days**.

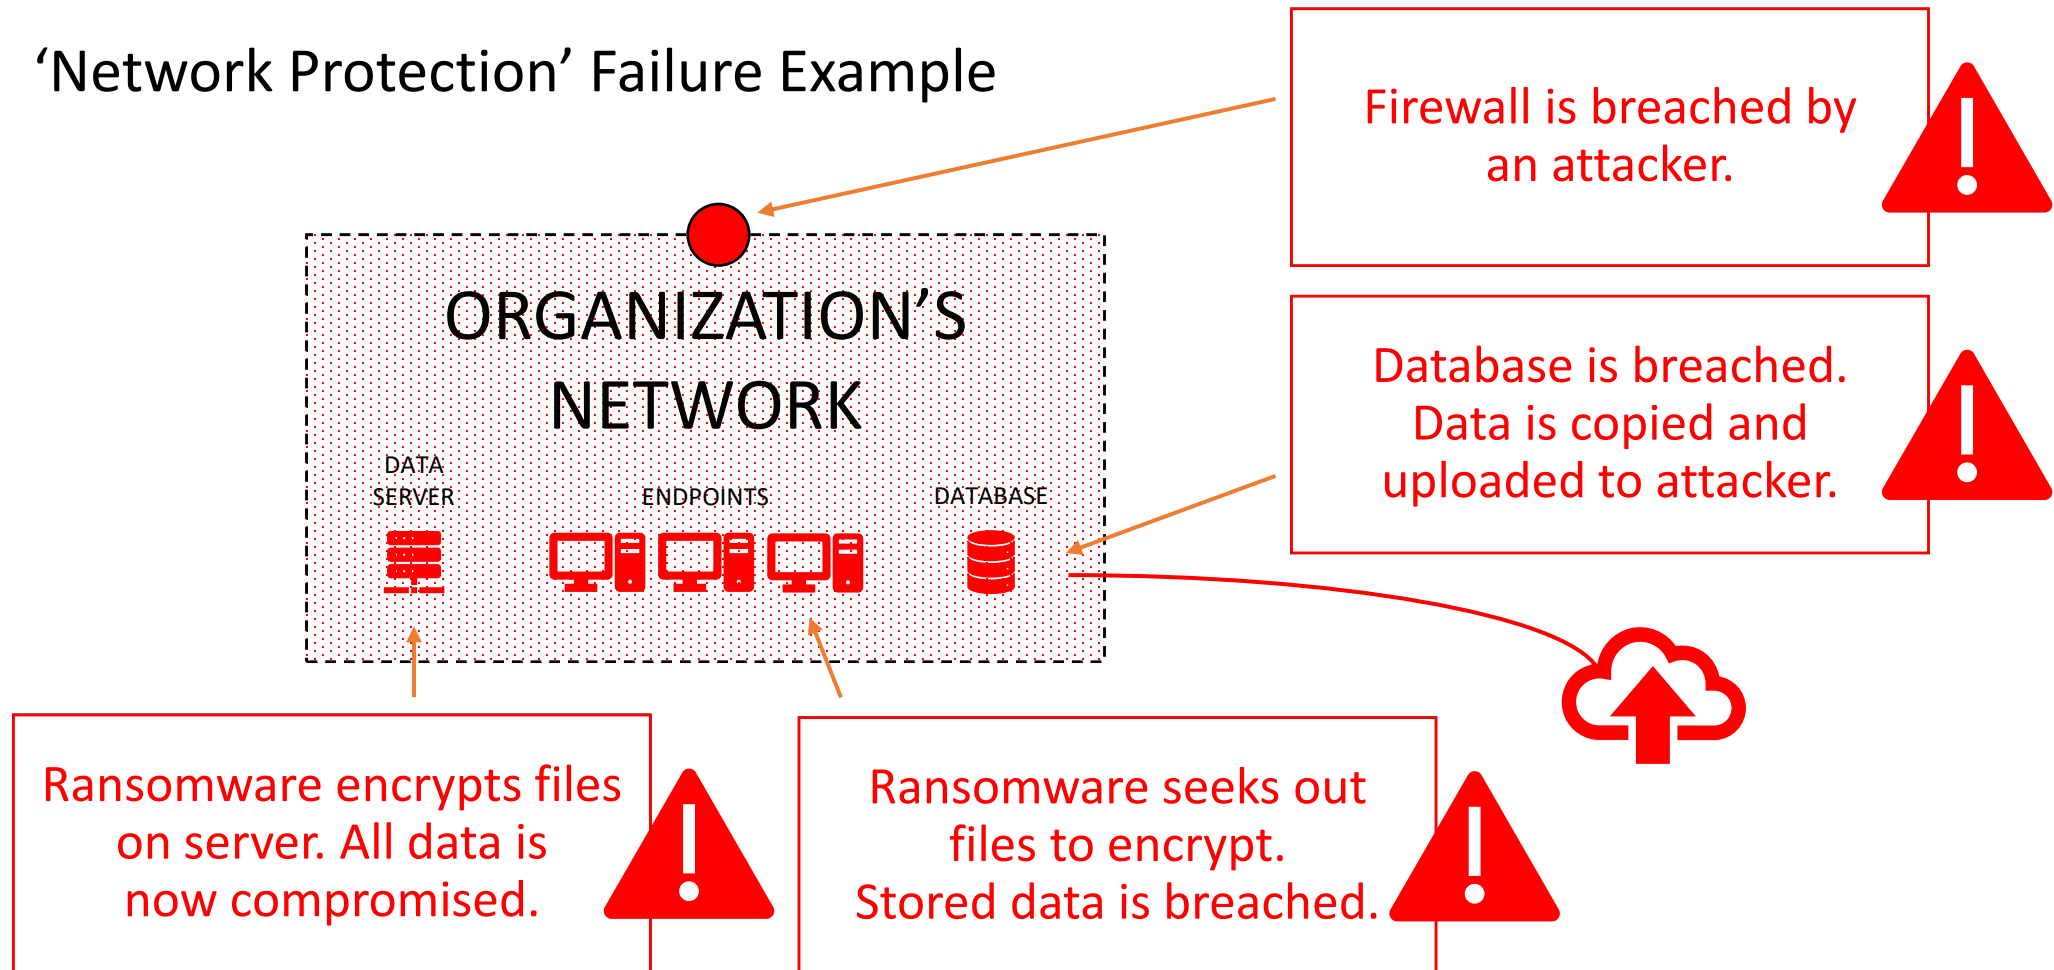

Cybersecurity software companies are finding brand **new threats** every second

Networks can **never be 100% secure** due to internal, accidental and evolving threats.

The Need For Evolved Cybersecurity

'Network Protection' Failure Example

Our Solution: Protect Data First

- **VEIL-X Suite** is an encryption toolset that protects data at creation, at rest, or in transit automatically or by using one simple interface. Files can only be accessed by authorized users with verified credentials and are automatically encrypted in these locations using patented CKM cryptography (Constructive Key Management).

Protect Data ANYTIME, ANYWHERE.

- When your data is encrypted by VEIL-X Suite it is immediately rendered useless in data breaches. Attackers are unable to decrypt or open any files.

- VEIL-X Suite monitors locations and encrypts any data you store there. No actions are required by users, removing all potential "user error" threats.

- All files sent via email can be encrypted with VEIL-X Suite. When an authorized user receives the files, they can decrypt them easily and quickly.

VEIL-X Suite Package

A cloud-based platform for managing network access, controls, and administration.

A portable, lightweight and easy to use “drag & drop” file encryption application

An **automated** encryption & decryption application for local or remote locations

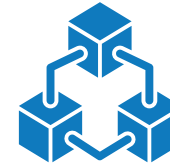

VEIL-X Suite Overview

**Simple, Intuitive
Interface**

**Works With Any
File Type**

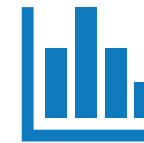

**Works Seamlessly
with Environment**

**Zero Downtime;
Fast Implementation**

**Expert Support
Team Available**

**Flexible, Scalable
Solution**

Here's How

The CybX Process

VEIL-X Suite conforms to our cybersecurity process by itself, or as part of Resilient-X.

VEIL-X Suite allows you to **PREDICT** exposure levels using access controls.

PREVENT data breaches by rendering it useless in case of ransomware attack.

RESPOND by enhancing your security posture and reviewing access controls.

Contain data breaches or loss and **DETECT** the source by utilizing data audit trails.

Thank you
