

CybXSecurity LLC.

IF YOU CAN DEFINE IT,
WE CAN DEFEND IT.

Why CybX?

Traditional perimeter security methods are still viable, but inadequate. Your privacy and data is still at risk. A year from today, there will be 204,400,000 new malware strains, and 1,460,000 ransomware attacks targeting U.S. organizations.

Our primary strategy is to **Protect Data First** and ensure that your organization's most targeted asset is secure. Our solutions manage the security posture of devices, data, and software, from inside of your network. This holistic strategy ensures you can identify vulnerabilities, defend against them, and remediate if necessary – all in real-time.

- FlareDNS
- Insights
- Cloak

DATA PROTECTION

CybX protects your data with Quantum Safe encryption and uses immutable backup technologies. Your data is protected at creation, in transit and at rest. In the event of a ransomware or data breach, your data is rendered useless to an attacker. Remediation happens in hours.

USER PROTECTION

Your users should be able to use devices, email, and the internet without putting your organization at risk. Our solutions are designed to protect employees from dangerous websites and files, limiting the threat of malware, ransomware, data breaches etc.

PROTECTION ANYWHERE

When you protect your data, location is a matter of geographic convenience. Your data is secure whether you store it on a laptop, on a server, in the cloud, or collaborate with people or companies anywhere in the world, in or out of the office, your data will be protected.

With our Modular Solutions, we can...

FLARE SENTINEL

Flare

A Deception
Decoy Solution

FLARE SNARE

Sentinel

Flare Sentinel is designed to mimic real perimeter hardware and software and acts as a **"honeypot"** for cyber attackers. Sentinel gathers data constantly about the attacker's activity, including passwords used, methods employed, and other invaluable data points.

Snare

Flare Snare is a **"honeynet"** designed to mimic real devices. Snare is deployed inside your network and will capture any attempts to hack or disrupt devices by hackers or internal threats.

**One
Consultation,
No
Obligation.**

By carefully analyzing the data provided by these deception & decoy systems, we are able to strengthen your security posture, understand the methods and tactics used by attackers, and highlight the origins of attacks.

**Our Primary
Objective is
to Ensure
Your Data Is
Secure.**
