

CybXSecurity LLC.

IF YOU CAN DEFINE IT, WE CAN DEFEND IT.

# Why CybX?

Traditional perimeter security methods are still viable, but inadequate. Your privacy and data is still at risk. A year from today, there will be 204,400,000 new malware strains, and 1,460,000 ransomware attacks targeting U.S. organizations.

Our primary strategy is to **Protect Data First** and ensure that your organization's most targeted asset is secure. Our solutions manage the security posture of devices, data, and software, from inside of your network. This holistic strategy ensures you can identify vulnerabilities, defend against them, and remediate if necessary – all in real-time.

## COMPANY CONTACT

## PRODUCTS OVERVIEW

- FlareDNS
- CybX Solution
- Halo
- Cyber Hygiene
- Flare Sentinel/Snare
- Insights
- Cloak

### DATA PROTECTION

CybX protects your data with Quantum Safe encryption and uses immutable backup technologies. Your data is protected at creation, in transit and at rest. In the event of a ransomware or data breach, your data is rendered useless to an attacker. Remediation happens in hours.

### USER PROTECTION

Your users should be able to use devices, email, and the internet without putting your organization at risk. Our solutions are designed to protect employees from dangerous websites and files, limiting the threat of malware, ransomware, data breaches etc.

### PROTECTION ANYWHERE

When you protect your data, location is a matter of geographic convenience. Your data is secure whether you store it on a laptop, on a server, in the cloud, or collaborate with people or companies anywhere in the world, in or out of the office, your data will be protected.

# flareDNS

- A solution that protects remote workers, blocks ads, malware, ransomware, phishing threats, and prevents IoT security exploits.

## What is DNS?

- Domain Name System (DNS) is how every device searches the internet using names people are familiar with.

- flareDNS provides an additional layer of protection by blacklisting dangerous sites and filtering out unwanted content, keeping employees on and off-site from facing unnecessary risks for potential cyber-attacks.
