

# WHY CYBXSECURITY OUTPERFORMS CROWDSTRIKE

In today's world of cybersecurity, CybXSecurity emerges as a more well-rounded solution compared to CrowdStrike, offering a wider range of security features that cater to today's business needs.

Both platforms provide foundational security capabilities such as Next-Gen Antivirus, USB Device Control, Host Firewall Control, Threat Intelligence, Detection and Response, Threat Hunting, IT Hygiene, Identity Protection, Connector Packs, and Support.

However, CybXSecurity distinguishes itself by offering additional critical security features that are absent in CrowdStrike's offerings.

## Features Exclusive to CybXSecurity:

- System Inventory
- Office 365, AWS, Docker Monitoring
- Vulnerability Management
- File Integrity Monitoring
- Immutable Backups
- DNS Protection
- Data Encryption Tools
- Host Secure Baseline Assessments
- Data Discovery

CybXSecurity's offerings, particularly in areas such as System Inventory, Office 365/AWS/Docker monitoring, Vulnerability Management, and Immutable Backups, provide a more robust cyber security posture for organizations.

These additional features allow a deeper insight into system vulnerabilities, broader monitoring capabilities, and stronger defense mechanisms against data breaches and attacks.

The comprehensive approach of CybXSecurity, integrating advanced features like DNS Protection, Data Encryption Tools, and Host Secure Baseline Assessments, ensures that organizations are not only protected against current threats but are also prepared for emerging challenges in the digital landscape.
